

Update of the ET Technical Documentation System (TDS)

The ET TDS has been inaugurated in 2009, during the ET design study period (2008-2011) and it is serving the ET community since more than 10 years. Originally, because the ET design study was funded by the European Commission funds, the uploaded documents were essentially all public. Now the ET project is assuming the structure of a “standard” large project and we need to restructure that documentation system.

Name

The ET TDS is reachable as instance of the Virgo TDS through the address: <https://tds.virgo-gw.eu/ql/?i=ET>

It is requested to create (at least) an alias that allows to reach the service through the address: <https://tds.et-gw.eu/ql/?i=ET>

We suppose that the referral URL will follow the new domain having a style like:

`https://tds.et-gw.eu/ql/?c=15494`

Please, comment if this is not true.

Document type:

The document Type needed for ET currently are:

Document Type	Description
Design	ET design document
Meeting Minute	Minute of the ET meetings
Official document	Official document of the collaboration
Presentation	Powerpoint or PDF presentation
Published Article	Published article (protected copy)
Scientific Note	Science Note
Technical Report	Technical note
Unclassified	All the rest

Access privileges

Although the large majority of the ET members are also LVC members, there are exceptions. For this reason, we need to create **additional** entries in the Access privileges field:

Access privilege	Description
ET	ET collaboration
ET-CB	ET Collaboration Board
ET-EB	ET Executive Board
ETPF-management	ETpathfinder management docs (restricted access)
ETPF-Raad	ETpathfinder Raad (restricted access)
ETPF-STAC	ETpathfinder STAC (restricted access)
ETsar	ET Sardinia private documents
ET-SC	ET Steering Committee private documents

We will provide the list of persons composing those categories in the next future; we need also to define (or to derive) a standard procedure for the updating of the corresponding memberships.

Series

The series currently existing in the ET instance of the TDS are obsolete. We need to renew completely them.

Hereafter an initial scheme derived from the Virgo one, but ET is in a transition phase and soon this scheme will grow up:

- Committees
 - Collaboration Board
 - Council
 - Executive Board
 - Steering Committee
- Data Analysis (copy here the Virgo structure)
- Meetings
 - ET symposium
 - Regional meeting
 - Technical meeting
 - Weekly Steering Committee
- Outreach (copy here the Virgo structure)
- Project
 - ET
 - ETpathfinder¹
 - ET Sardinia
 - SarGrav
- Published Document (copy here the Virgo structure)
- Technical area (copy here the Virgo structure, but just to the first level)
- ET management

Desiderata

This section describes desired modifications to be implemented if possible

- 1) For the documents having the series “Project->ET-pathfinder” enabled, we are wondering if it is possible to have either the prefix “ETPF-” or the double prefix “ET-” and “ETPF-”.
- 2) The structure of the code ET-xxxxv-yy presents a weakness. If a list of files is downloaded from the repository to a local folder, the local file manager will not display them ordered by data, because the year digits are at the end. Reversing the code in the order ET-yy-xxxxv will make them to appear naturally ordered in a local file listing action.
 - a. Is it possible to reverse the order?
 - b. What is the impact on the old files?
 - c. Is it possible to have the code in the referral URL like:
 - i. https://tds.et-gw.eu/ql/?c=15494_ET-20-00009A ?

¹ See point 1) in the “Desiderata” section
